

Capital Markets Snapshot

Prepared by LWS Financial

Week ending August 11, 2023

The inflation reports of the past week painted a mixed picture for investors. The Consumer Price Index (CPI) came in line with expectations with a year over year increase of 3.2%. The core CPI figure, which excludes food and energy, was up 4.7% on an annual basis and unchanged for the month. All these readings reflected moderating levels of pricing pressure. However, at the wholesale level, the Producer Price Index (PPI) came in higher than expected at 0.8% for the month. Another key release this past week included the University of Michigan Consumer Sentiment Index which fell slightly from last month's reading. However, the current level remains well above the reading of one year ago.

Fixed Income Markets Overview

- Treasuries reached their high for the week on Friday following the PPI report.
- The rating agencies were in the news again this week. This time it was Moody's who downgraded the credit of ten small and mid-size banks based on concerns that the current financial strains "could erode their profitability."
